

Exact intrinsic-time power schedule: $m = 10^5$, $\sigma^2 = 25$, $r_\theta(T) = 128\max(1, T)^\theta$; display $T \leq 631$ (shaded tail not fitted)

(a) Component race from $T = 0.1$

(b) Phase envelope, control, and sentinels

(c) Frozen-window stress test, $\theta = 0.90$
